Description

StarFire SG1024/MA Printhead

Description:

The StarFire SG1024/MA is a compact, self-contained unit built to withstand demanding industrial textile and other applications. It uses field-proven materials to deliver consistent output over a long service life with continuous ink recirculation and single-color operation at 400 dots per inch from 1024 independent channels arranged in eight rows in a single replaceable metal nozzle plate that is designed to withstand abrasion. The unit is compatible with solvent, UV curable and aqueous ink formulations.

Each SG1024/MA printhead has 1024 independent channels arranged in 8 rows in a single nozzle plate for resolutions up to 400 dpi. All 1024 nozzles can be fired simultaneously or individually.

Features:

- . Robust and repairable construction
- . 30 picoliter nominal drop size

- . 1024 individually addressable jets
- . Incorporate VersaDrop™ binary and grayscale jetting
- . Continuous ink recirculation with RediJet™
- . Removable/replaceable coated metal nozzle plate
